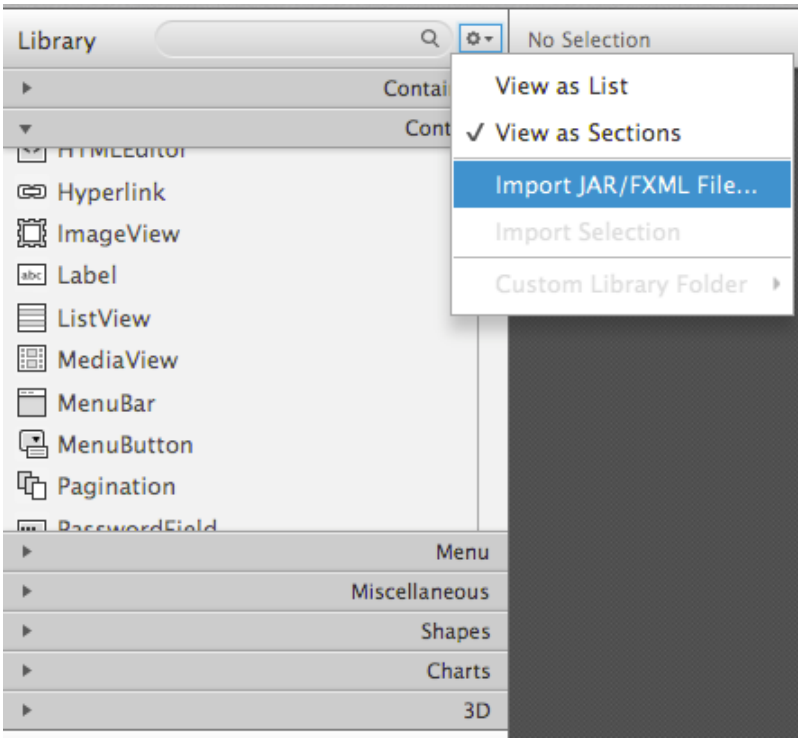
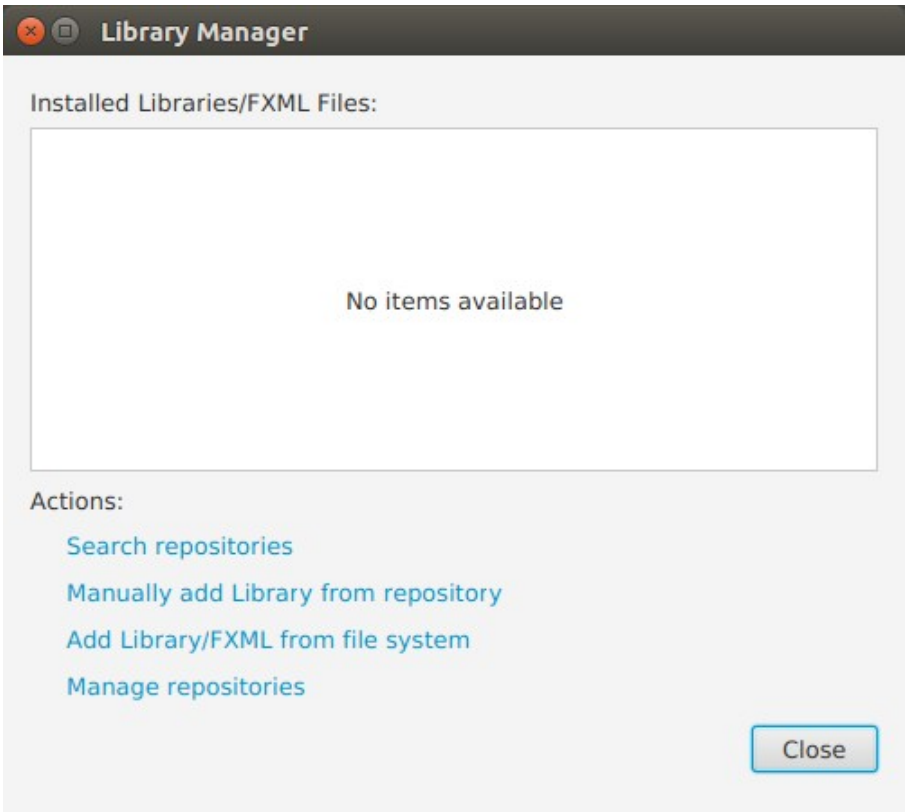
Since SceneBuilder 8.2.0 you can directly search for an artifact from SceneBuilder and include them using the brand new Library Manager \o/

To open the Library Manager:

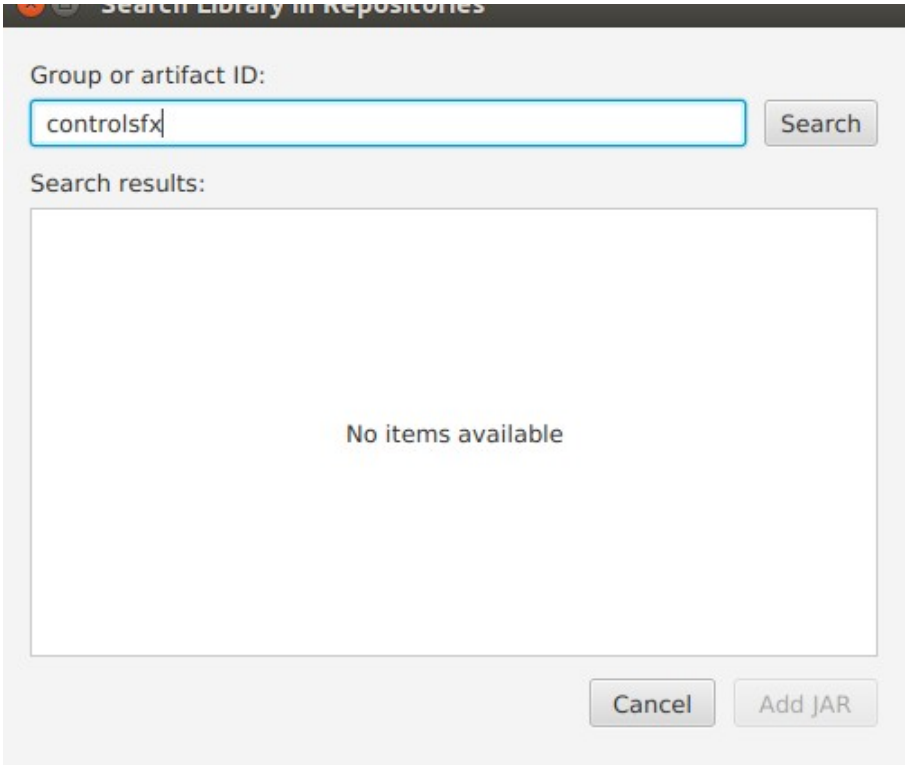
- Click the down arrow to the right of Library and choose import JAR/FXML File.



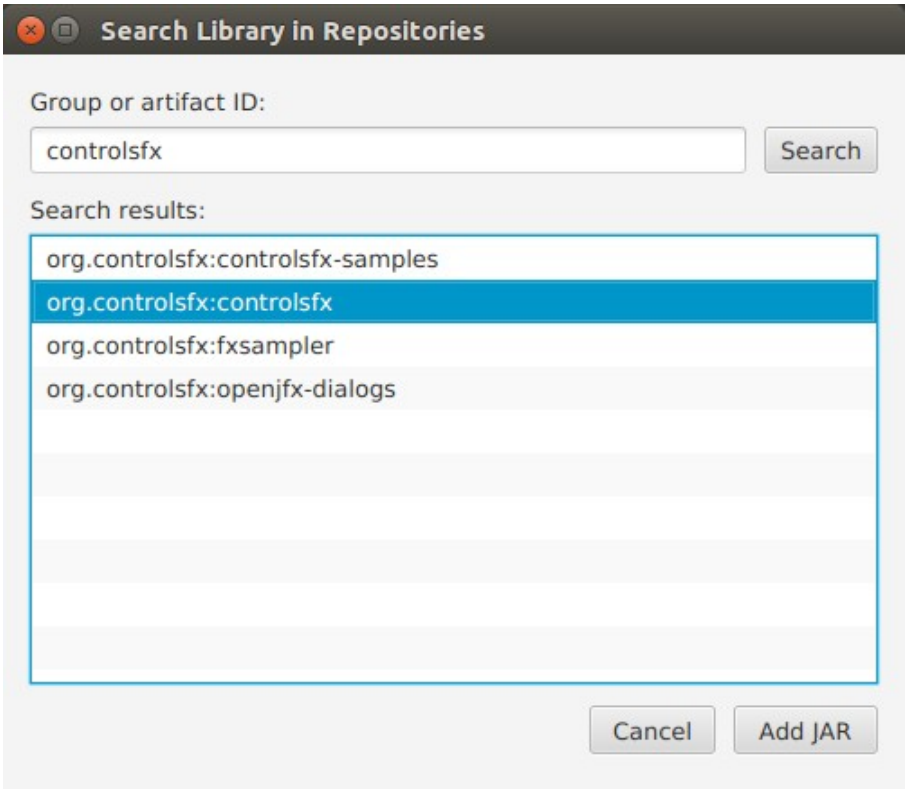
- This will open up the Library Manager Dialog:



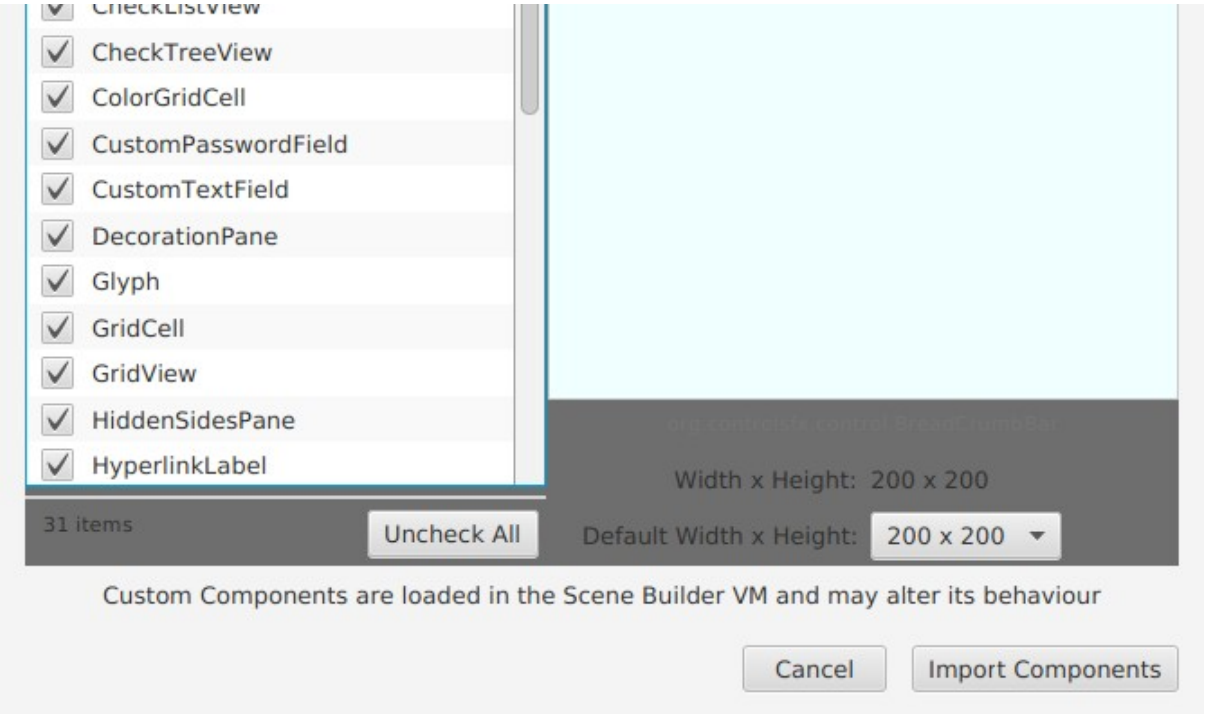
- Select "Search Repository" and type in "ControlsFX" and click the Search button.

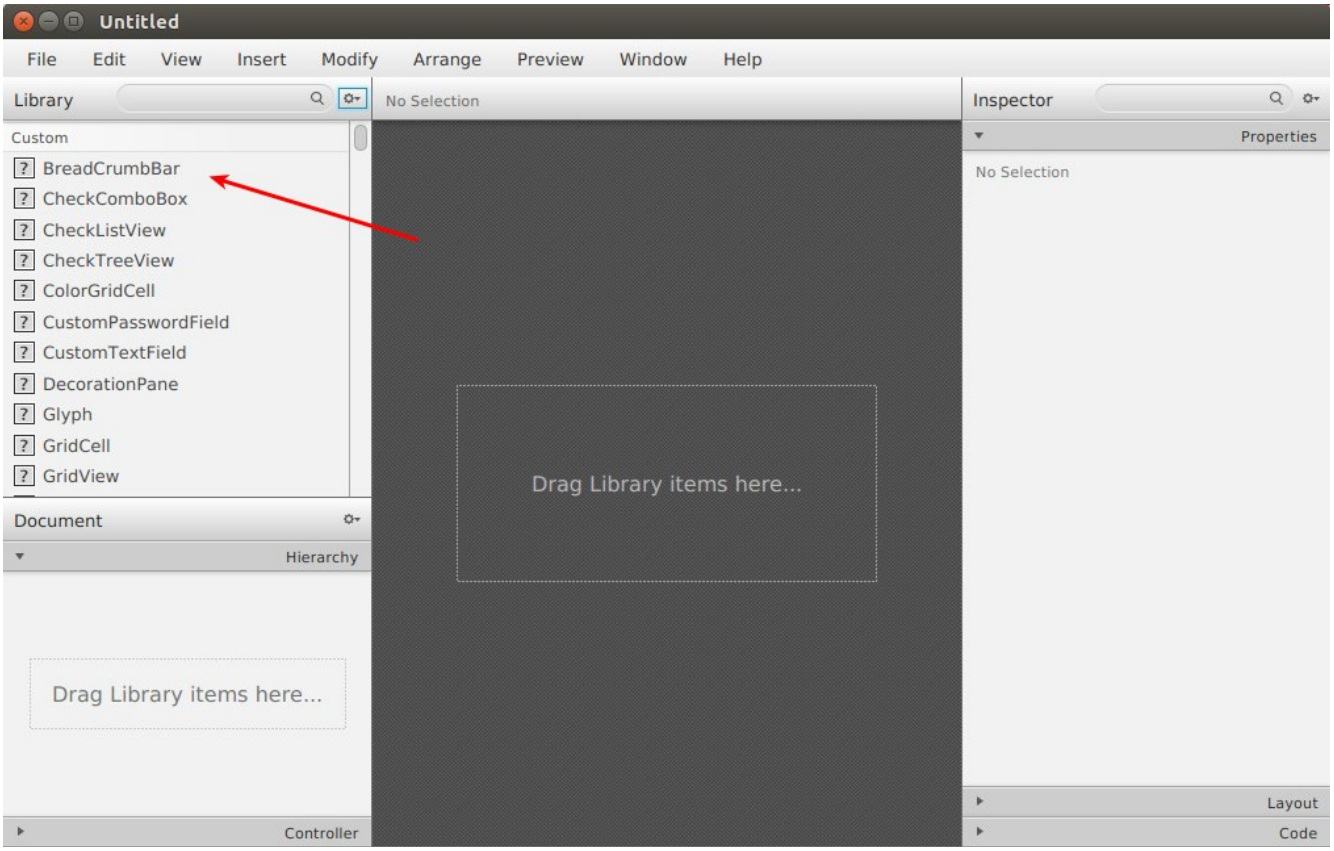


- This will display all the controlsfx artifacts listed in the repositories that is added by default. Choose "org.controlsfx:controlsfx" and click on "Add Jar".



- It then displays Dialog in which you can select the components that you want to import. Select them and press the "Import Component" button.





- All the selected components are loaded into the SceneBuilder.
